NOTE FROM NORM:

"The data represents less degradation of the DuraEdge products compared to the (Company A) and (Company B) products, respectively. The results suggest that DuraEdge products have greater aggregate stability than both the (Company A) and (Company B) products. The results suggest that the DuraEdge products hold a comparable amount of water as the other two product lines."

ASTM D7428 - RESISTANCE OF FINE AGGREGATE TO DEGRADATION BY ABRASION IN THE MICRO-DEVAL APPARATUS

ASTM E2399 - MAXIMUM MEDIA DENSITY FOR DEAD LOAD ANALYSIS OF VEGETATIVE (GREEN) ROOF SYSTEMS

SUMMARY OF MICRO DEVAL TEST METHOD:

ASTM D7428 - The Micro Deval Test is a measure of abrasion resistance and durability of mineral aggregates resulting from a combination of actions including abrasion and grinding with steel balls in the presence of water.
ASTM E2399
MAX MEDIA WATER RETENTION:
The quantity of water held in a media material that has been subjected to a specific amount of compaction and hydrated by immersion to simulate prolonged exposure to both foot traffic and rainfall.
